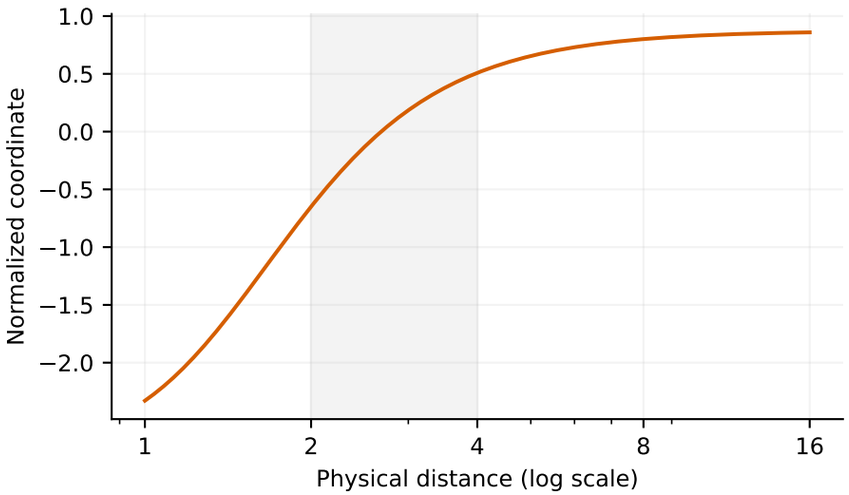
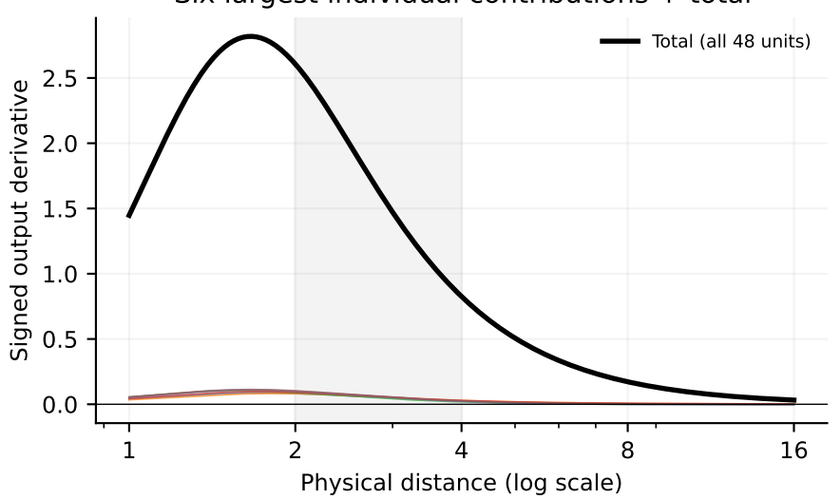
A zero output slope can come from opposing unit contributions, not every unit being saturated
Saturated = |tanh activation| > 0.95; six units shown are selected only for illustration

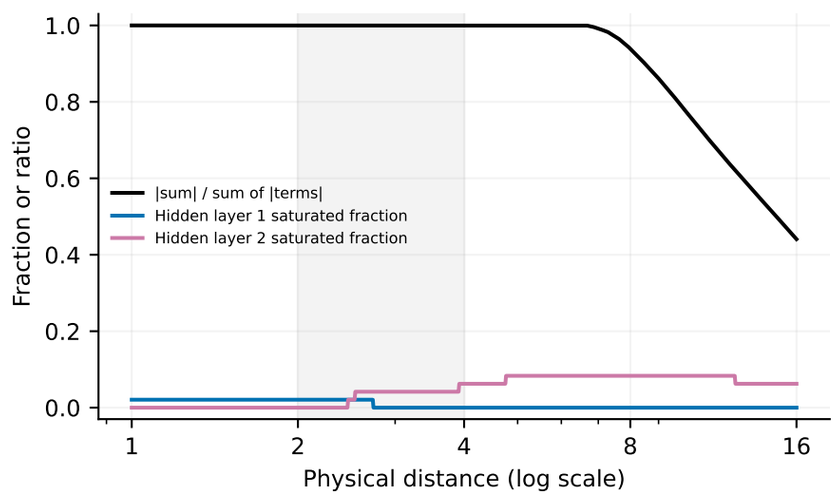
Seed 130: learned curve



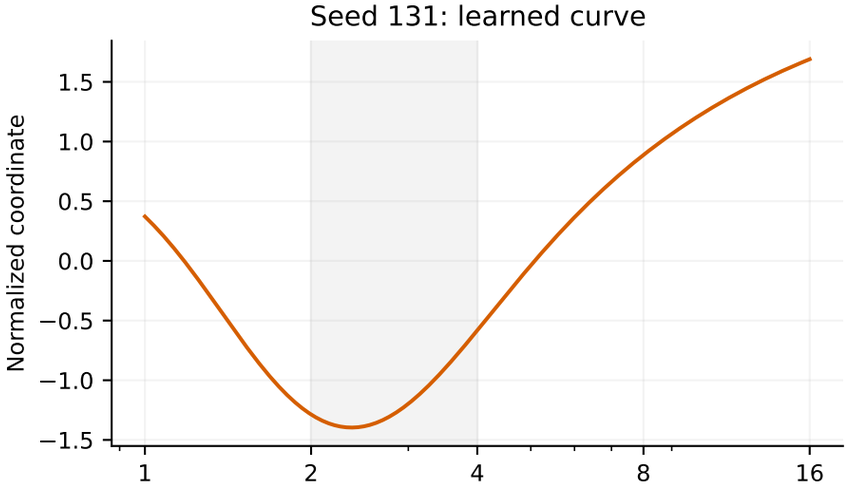
Six largest individual contributions + total



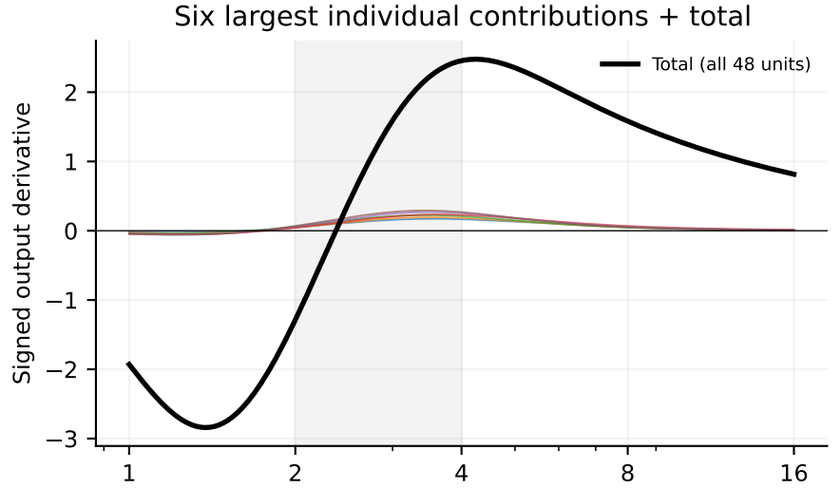
Cancellation versus tanh saturation



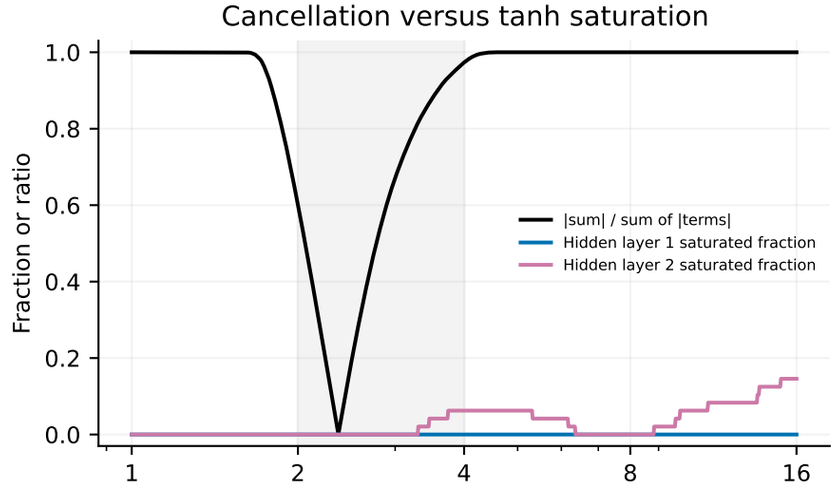
Seed 131: learned curve



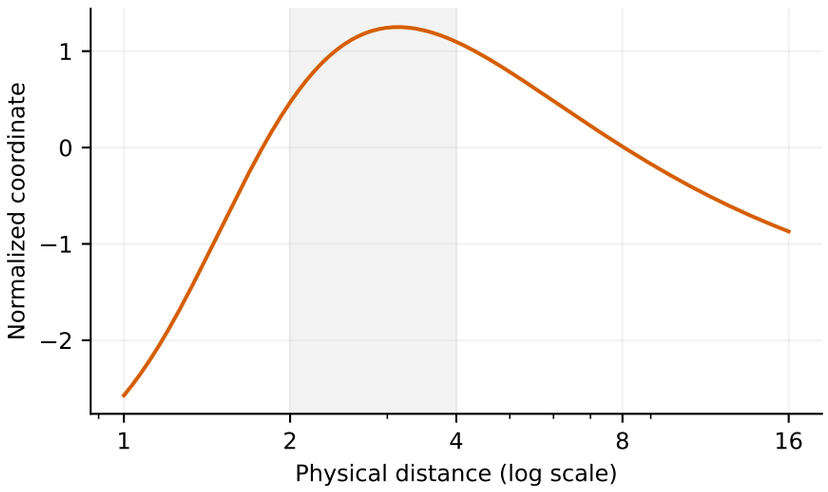
Six largest individual contributions + total



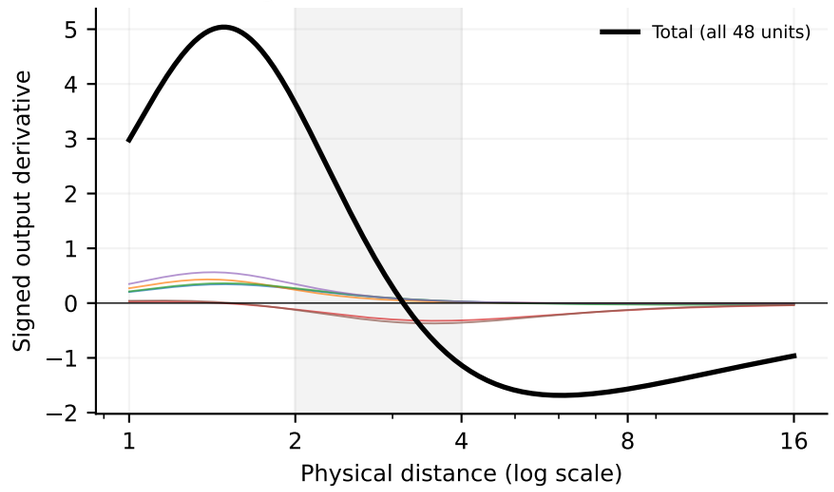
Cancellation versus tanh saturation



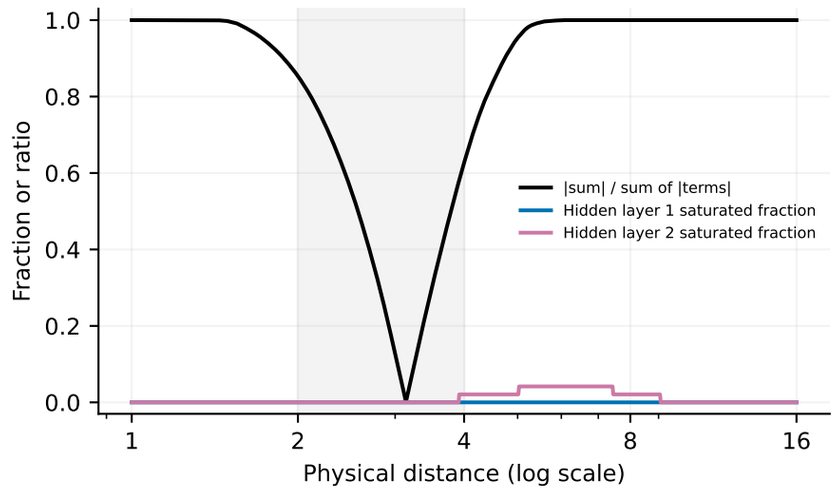
Seed 136: learned curve



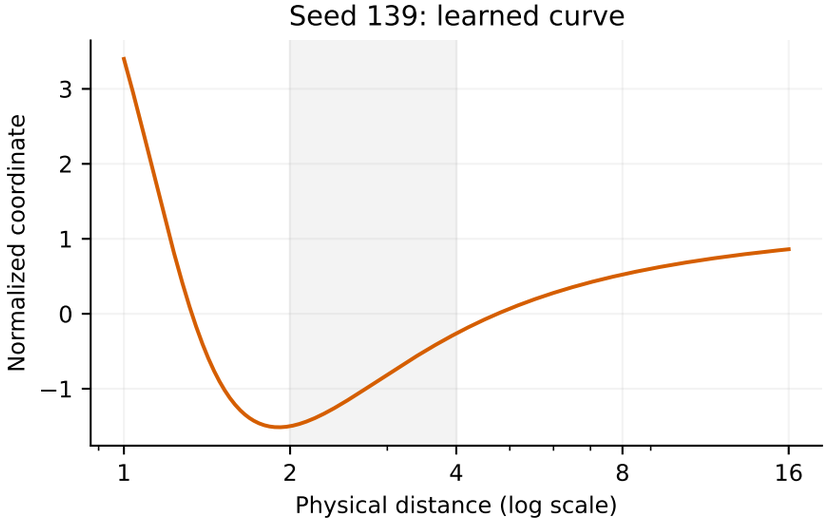
Six largest individual contributions + total



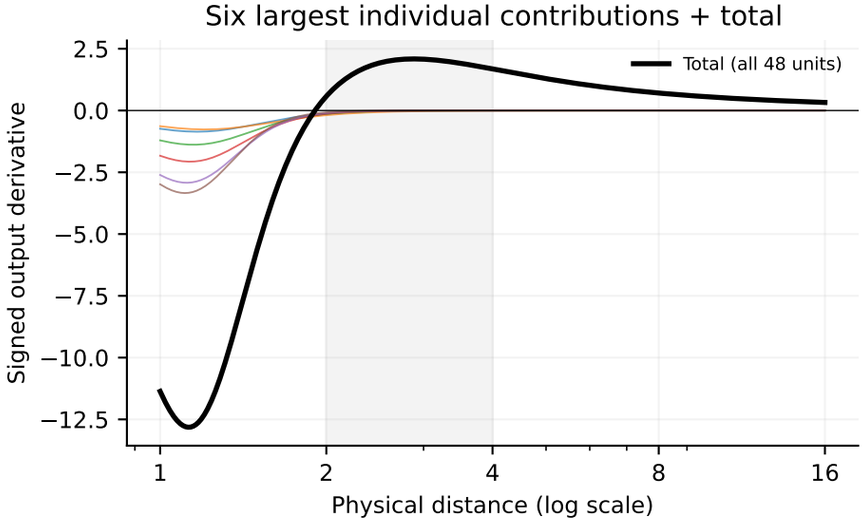
Cancellation versus tanh saturation

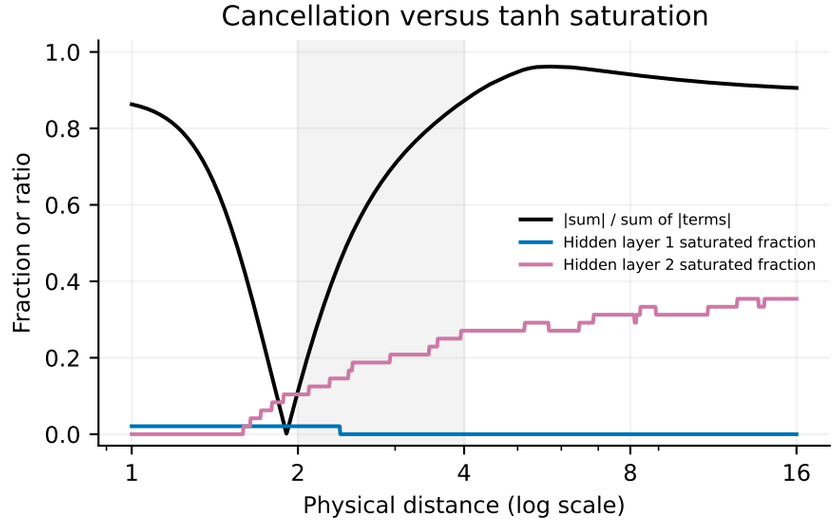


Seed 139: learned curve



Six largest individual contributions + total





Cancellation versus tanh saturation
